Shutter: 1/250s • Aperture: f/8.0 • ISO: 100 • 24mm Prime

The Silence of the Glaciers

Rising more than a thousand meters straight out of the crystalline ocean waters, the western fjords present an extraordinary visual geometry of vertical granite walls, cascading meltwater waterfalls, and ancient pine forests veiled in morning mist.

During the late autumn transition, the angle of northern sunlight casts deep sapphire shadows across the valleys while the peaks remain bathed in sharp amber illumination. Capturing this extreme dynamic range requires careful exposure calibration and calibrated CMYK color curves to preserve both deep shadow tones and delicate cloud highlights.

Paper Selection Notes:
• 200 GSM Silk coated paper stock ensures zero ink bleed-through onto reverse spreads.
• Hardcover case binding with 3.0mm greyboard guarantees flat presentation.
